Information & Instructions for Private Well Analysis

- * No samples are accepted on Fridays or the day before holidays.
- * Follow these instructions for FHA/VA and Private Well list.
(If sampling for bacteria only, skip steps 3 and 4)
 - 1) Get bottle set from laboratory
 - 2) Flush lines for at least 15 minutes from the kitchen faucet.
 - 3) Leave water undisturbed for at least 6 hours, but no more than 12 hours.
 - 4) Collect a "first flush" grab sample from the kitchen faucet, fill the bottle to the rim.
 - 5) Then sterilize the faucet with alcohol inside and outside.
 - 6) Let water run for at least 2 minutes, then fill remaining 2 containers with water.
 - 7) Put samples in a cooler with ice/pack and return to lab with completed form.
- * There must be no chlorine present at time of sample collection.
- * All lines must be completed on the chain of custody for analysis to begin.

Standard turn around time is 10 days.

2020
